Resistance table

BUSCHJOST Solenoid Valves

Which materials for which fluids?

The resistance table supports you in your search for suitable materials and compiles information on the chemical resistance of sealing and enclosure materials for gaseous and liquid media. **The table is subject to updating.

Contents of the resistance table

- The suitability of the materials is confirmed by a simple "+".
- For some media, only the minimum requirement is confirmed with a "+". This means that higher quality materials can also be used.
- Ask if you are unsure, even if a medium is not listed.
- Operating conditions cannot be derived from the table.
- There is no such thing as an unconditional application. Therefore, also consider operational dependencies such as pressure, temperature, viscosity, concentration, degree of contamination. These can have a negative effect on the longevity of the valve.
- The table does not claim to be complete.
- No warranty claims can be derived from the information given.
- We reserve the right to change the information given at any time without notice.
